

Accomplished and dedicated professional with expertise in providing data-driven solutions to complex business challenges. Skilled in delivering insights, analytics, and recommendations to support strategic planning. Experienced in developing advanced algorithms and predictive models to enhance customer relationships and drive long-term success.

Areas of Expertise

- Data Storytelling with Metrics
- Modelling & Statistical Analysis
- A/B Testing
- Anomaly Detection and Monitoring
- Machine & Deep Learning
- Process Improvement
- Stakeholders Engagement
- Team Building & Leadership

Education

Masters in Science in Data Science
Columbia University, New York, NY | 2017

Coursework: *Applied Machine Learning, Deep Learning, Natural Language Processing, Algorithms for Data Science, Statistical Inference & Modeling, Exploratory Data Analysis & Visualization*

Graduate Course Assistant: *Machine Learning for Data Science and Analytics (Edx.com), Computing in Context Policy*

Bachelor of Science (Honors) & Master of Technology in Civil Engineering

Indian Institute of Technology Madras, India | 2014 | 3.98/4
Academic Distinction for the highest CGPA in 7th & 8th semester
Master's thesis: Application of Stochastic Calculus to Structural Dynamics

Technical Proficiencies

- Python (Tensorflow - Keras, NumPy, SciPy, Matplotlib, Pandas, Scikit-Learn, GraphLabs, NetworkX)
- R (CARET, ggplot2)
- Presto, MySQL, Spark, Tableau

Professional Experience

Meta (Facebook), New York, NY **Data Scientist**

Reality Labs — Horizon OS (VR/MR Devices) **2025 Aug – Present**

- Leading measurement strategy, experimentation & feature rollouts for Horizon OS System apps to enhance consumer productivity experience on VR devices.
- Modeled long-term engagement and monetization trajectories for future MR device launches using top-down and bottom-up forecasting approaches.
- Collaborated closely with PM, UXR, and Engineering partners to define success metrics, shape product decisions, and deliver features in a fast-moving, cross-functional environment.

Infra Data Centers (Global Operations) **2021 June – 2025 July**

- Led a cross-pillar initiative to improve process efficiency and reliability across Meta's global data center operations using predictability, optimization, and automation.
- Built an alerting and monitoring framework that enabled proactive incident response, saving **\$9M+/yr** in Ad revenue by reducing large-scale service-impacting failures.
- Developed measurement strategies and benchmarks to evaluate server repair quality through A/B testing, business engagement, and unsupervised ML, increasing server availability and reducing rework.
- Created adaptive metrics for scaling AI capabilities, supporting rapid onboarding of GPU servers critical for IG product launches and GenAI initiatives.

Goldman Sachs, New York, NY **2018-2021**
Senior Analyst - Vice President, Corporate Treasury

- Built a liquidity management platform with capability to access funding data from various source systems at different snapshots in time. This platform is used for performing analytics and reporting by treasury operations users.
- Projected in real-time High-Quality Liquid Assets (HQLA), optimizing on which helps the firm save interest expense in orders of millions
- Built, deployed & monitored model for anomaly detection in High Quality Liquid Assets using time-series forecasting and Anomaly detection techniques
- Generated aggregated reports with KPIs for assessing liquidity risk and unencumbered assets using Presto
- Developed scalable pipelines leveraging distributed computing in spark to process & store tera bytes of data in HDFS

EXL Service, Bangalore, India **2014– 2016**
Consultant – Decision Analytics

- Consumer Analytics: Executed cohort analysis to trace churn characteristics & forecasted subscriptions with a MAPE of 9.4%. Performed sensitivity analysis to identify assumptions that led to 12% increase in forecast performance
- Retail Analytics: Modelled sales conversion using Linear Regression combined with an AR Model to predict store traffic
- Marketing Analytics: Modelled revenue as a function of marketing spends using a 2-step regularized sequential model with R2 ~ 90%. Incorporated lagged and diminishing returns effects of advertising via feature engineering
